Radio Isotope (Gamma) Sources. Manmade radioactive sources are produced by introducing an extra neutron to atoms of the source material. As the material rids itself of the neutron, energy is released in the form of gamma rays.

GAMMA.INV function - Office Support

GAMMA LIB (Gamma Librae). On the bright side of fourth magnitude (3.91), Gamma Librae anchors an eastern corner of the traditional figure of Libra, the Scales, which in ancient times held the autumnal equinox in its weighing pan. Gamma Lib, however, has the misfortune to be not only a common sort of star, a class G (G8.5) helium-fusing giant (some say a K0 giant, making it even more common ...

The gamma function is defined as
$$\Gamma(z) = \int_0^{\infty} t^{z-1} e^{-t} dt$$
 Here are a couple of identities and their proof for the gamma function.
